

PULSE

Your solution for modern music rhythms

INSTALLATION

Please read the guidelines on how to install Pulse instrument plugins.

MAC

Double click the provided package (.pkg) file to install the software.

WINDOWS

1. Extract the .zip archive of the purchased product.
2. In Windows operating system, there is no standard static folder for VST Plugins. It depends on the host you're using or how you set up your system and where you have located your VST plug- ins.

For example, if you have stored all your VST plug-ins on disk C -> Program Files -> VSTplugins folder, here is the path where you have to copy main folder of Pulse VST instrument: C:\Program Files\VSTPlugins

Please check with the settings of your DAW program and verify the correct location of VST plug- ins.

3. When you have found your VST Plugins folder, copy the main folder of ThaLoops VST instrument to your main VST plug-ins location. Make sure you move or copy **both** .dll file and .instruments folder to your VST plugins folder.
4. Now you are ready to use Pulse VST instrument instrument in your host application.
